

The blue planet: 3rd from the sun - not too close, not too far
A planet of life to nurture, so life will continue
far into the future.

Light Pollution = Wasted Energy, Wasted Money, and
Untoward Modifications of Earth's Surface & Atmosphere

- One-quarter of all energy consumption worldwide is used for lighting. Lights in homes and offices account for 20%-50% of this.
- Natural resources are wasted (hundreds of millions of barrels of oil & tons of coal burned needlessly; hydroelectric energy wasted).
- Environmental destruction, water and air pollution, and ecological malfunction are increased.
